Tic Tac Toe Game Using Tkinter

Made By: Tanmay Pandey

Introduction

Tic Tac Toe also known as noughts and crosses(in Britain), X's and O's(in Netherlands) and x and o(in India), is a pencil paper game of 2 player i.e. Player X and Player O, who takes turns in marking the places of a 3x3 matrix. The player who succeeds in placing 3 consecutive X or O in the grid wins the game.

I have designed a computerised version of the game, using python tkinter in which there is a grid and the two players have options to reset the game, start a new game, check the scores and make their moves using buttons, provided in the game. It is a user-friendly game with simple options as depicted in the picture.

So, hope you will have great experience playing the game.
